Mentoring Session(s) Worksheet

Service Design and Engineering 2026

Timing: ca. 45 minutes per session, per team

Goals

- Draft outline of the lab
- Finalised technologies selection
- Where needed, finalise the context/domain of your examples/exercises
- Finalised roles among team members

Before the meeting

Required

- Prepare a detailed outline of the lab including timing
- Prepare some ***draft*** slides, including
    - Grounding explanation (draft version)
    - At least two-three Examples + 1 exercises (draft version)
- Discuss and **decide** about what technologies you will use to perform the lab
- Decide how your distribution environment (Doccker, Virtual Machine..) will look like
- Finalised roles among team members

Useful

- Prepare collection of references, links, other materials that could be useful for your lab

End-of-meeting checklist

- ☐ You presented to us a first detailed outline of the lab
- ☐ You showed to us a skeleton of the slides presentation
- ☐ You showed to us some sketches of examples/exercises
- ☐ We discussed what grounding theory needs to be presented
- ☐ You presented to us a possible timeline for the lab presentation
- ☐ We discussed about useful educational material relevant for your lab

Hints:

- ☐ Please carefully consider your timeline between introduction, explanations and examples to be done. You need to stay in 2 hours for the whole of them (considering supporting your colleagues in the class during the examples and exercises)
- ☐ Keep examples very simple in order to show key aspects of the specific topic!

- [ ] Slides must have few concepts not full of text and readable even for colleagues with google.
- [ ] Links section has to contain also link to useful insights articles/tutorials/videos
